

THE SPECIALIST

ANTONY MOSS

Expertise & Impact

Antony Moss is our **Technology Solutions Specialist** in electronic security systems, with expertise ranging from small standalone alarm installations to complex, fully integrated solutions incorporating automation, access control, and CCTV across both modern and legacy platforms.

A Foundation of Expertise

With a lifelong passion for technology, Antony's interest in electronics and computers began at a very young age. He built his first PC at just five years old and, by six, had already constructed a basic alarm system using a pressure plate and piezo to detect movement at the front door. That early curiosity laid the foundation for a career driven by innovation, technical precision, and problem-solving.

"I've been fascinated by electronics and computers for as long as I can remember. I built my first PC at just five years old"

Technical Problem Solving

In his role, no two days are the same. Antony works across system programming, configuration, and optimisation, while also responding to urgent site visits to diagnose faults and restore critical services. His ability to adapt quickly and solve complex technical challenges plays a key role in maintaining system reliability and performance.

"I've always loved solving complex problems — especially when it means building smarter, more reliable security solutions and helping others grow their skills along the way."

Delivering Operational Impact

Antony's impact extends beyond technical delivery. He regularly mentors and trains technicians across a wide range of systems and technologies, helping to strengthen team capability and ensure consistent, high-quality outcomes for clients. By resolving complex issues, supporting field teams, and improving system performance, Antony contributes directly to reduced downtime, increased customer satisfaction, and long-term organisational capability.

Innovating Security Systems

His passion for new technology and complex integrations — including licence plate recognition, access control, intercoms, and advanced automation — continues to drive smarter, more effective security solutions for both residential and commercial clients.
